

Application for Instrument Access in the Triad Mass Spectrometry Facility

Investigators requesting access to the Triad Mass Spectrometry Facility should complete (as completely as possible) the attached application form and mail to at datodd3@uncg.edu for review. Some questions may require consultation with the facility director (Dr. Daniel A. Todd) for completion, and can be filled in after in person or email consultation.

Triad Mass Spectrometry Facility
University of North Carolina at Greensboro
301 McIver Street
346 Sullivan Science Building

Project Title:

Abstract

[The abstract should consist of a brief, non-technical synopsis of the proposed project, including the aims of the project, methodology, and expected outcomes, and the role of mass spectrometry in accomplishing these].

Please answer the questions below. Note that some questions below may require consultation with the facility director for completion. These questions may be left blank and filled in with input from the facility manager.

1. Does the project require student training? If so, how many students and from which research laboratories/departments, and on which instruments?
2. Who will carry out the proposed mass spectrometry analyses (i.e. student in the PI's laboratory, MS facility director, TA)?
3. Does the project require specialized sample preparation (i.e. solid phase extraction, tryptic digestion of peptides, SDS page separations) and, if so, who will be responsible for sample preparation?
4. Are funds available to support the costs of the proposed research, and what is the source of these funds?
